

# Install Fest Notes

- User doc/stack installation & testing
  - No live new installs but Victor Bolet/GSU was working remotely from GSU on bringing in their new IBM
  - Dali Wang/SURA, John-Paul Robinson/UAB and Shawn McKee/UMich volunteered to review and provided feedback during the session
    - Please send op sys, how far you got, and any feedback you haven't sent yet asap to: <marytrauner@bellsouth.net>
  - PR may be interested in adding a cluster sooner than later but has to talk to the owners (bio dept).
  - Email during the session from Taner Pirim/MCSR to schedule time w/Jim on use of cert from SURAGrid CA.
  - MFY will schedule call w/the stack team for any loose ends on stack/doc, then post new version to the Web

# Install Fest Notes

- Good side discussion on making infrastructure more useful to, and used by, application teams.
  - Ideas for specific follow-up:
    - Review current info for apps (in portal and user doc) and tweak/improve as we can
    - Possibly eventual design of packaging tool/process/assistance to apps teams for ease in configuring resources for their use.
    - [As of next day meeting: Linda Akli will be arranging an “apps think” to discuss the above and also some items she has on her list.]
- Idea for Install Fest next September?
  - “Compliance Fest” (but sure do need a better name...) for more complete use of current components
  - Live set-up or demo as applicable, from both apps & resource perspectives
  - Addressing: env variables, user site admin interface, cross-cert for any that are still using workarounds, sharing methods for utilizing account info from the LDAP, other? (maybe accounting data input by then?)
